#### 1. Coupled processes

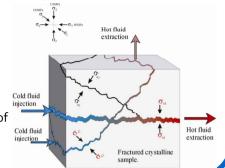

Design and build of new testing cell capable of recreating in-situ reservoir conditions at 3km depth for experimental investigation of coupled processes (THMC) relevant to reservoir performance and caprock integrity at bench scale (circa 20 cm diameter core).

#### 2. In-situ conditions

**True in situ anisotropic stress** i.e. the three principal stresses ordered  $\sigma_1 > \sigma_2 > \sigma_3$  **Temperatures** of up to 120°C are required for 3D fluid flow

Stress anisotropy ( $\sigma_1 > \sigma_2 > \sigma_3$ ) impacts on a number of factors including the generation of permeability anisotropy, the opening and closing of fractures and microfractures, dissolution at grain boundaries and normal stress across a fracture

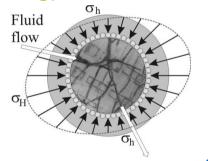

# 3. Sample scale

- Ability to investigate new scale of rock mass responses under in situ conditions
- Facilitate representative upscaling
- 18cm diameter samples will include fractures and matrix
- Bridge the scale gap between conventional experiments and field measurements

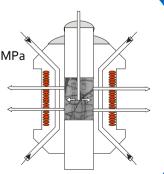

# 4. GREAT cell technology

- An array of Pressure Exerting Elements (PEE) replace the single annulus which traditionally generates the uniform radial stress in conventional triaxial cells
- Selective pressurization of the PEE's enables differential radial stresses to be generated
- Axial stresses are applied through steel platens

### 5. Design capabilities

- Maximum stress up to 100 MPa (1000bar, 14000psi)
- True triaxial stress  $\sigma_1 > \sigma_2 > \sigma_3$ , max. stress anisotropy 50MPa
- Fluid Pressures to 4oMPa (4oobar, 56oopsi)
- Temperature to 120 °C (248 °F)
- Vertical and cross sample fluid flow and sampling
- Multiphase flow / Dense phase (supercritical) flow
- 20cm diameter rock samples
- Complicated 3D Rock Mass and different rock types
- Acoustic, electrical and resistance imaging

### 6. Applied Geoscience applications

- Hydrocarbon extraction
- Caprock integrity
- Geothermal reservoirs
- CO2 sequestration
- •Nuclear waste containment
- Reservoir fracking
- Enhanced Oil Recovery
- Mantle studies
